

Extreme Warmer

The Extreme Warmer jacket has taken the requirements of thermal jackets for dogs to a new level, both for dog walkers and those involved with dog sports. The foil pattern which reflects the dog's own body heat back to the dog, as well as the water- and windproof surface material make the jacket especially warm, as well as pleasant to use. The Extreme Warmer is the warmest jacket in the Hurttä selection.

In addition to the high collar, the jacket has a thermal tricot hood which can be raised to warm the ears and head. The jacket protects the most imperative muscles for heat production, as well as the neck, abdomen and rib cage. The pleasantly soft, slightly flexible material does not limit the mobility even on a sensitive dog. The abdominal section of the jacket has been dimensioned to cover the abdomen, which is sensitive to the cold, as well as possible. The effective 3M reflective pipings and the large reflective prints at the front and rear hem of the jacket improve the visibility of the dog in the dark.

The renewed version of the Extreme Warmer has had some details added to it that improves its utility from before: the adjustable length of the back, as well as the adjustable section in the hood have been inconspicuously placed on the inside of the jacket.

Snap buttons have been added to the rear hem, with which the protective rear hem can be folded under the jacket, if desired. In addition, the thermal ability of the jacket has been renewed with a softer, thicker type of wadding.

- 100% PES 150D surface fabric
- Waterproof, laminated material: waterproofness up to 10,000mm
- Tearing strength: 15.3N/19.4N
- Taped back and rear seams
- 100% PES technical 180g knitted lining, with a heat-reflecting aluminum foil pattern
- 140g wadding (sizes 30-65) / 120g (size 25)
- On ECO version shell fabric, wadding and belt are made from 100% recycled material. Lining is made from 50% recycled polyester.
- Fluorocarbon-free Rudolf ECO water-repellent treatment
- Both the lining and surface fabric are certified to be safe and free of harmful substances in accordance with the Öko-Tex-standard 100.
- Adjustable back length
- Opening for a harness in sizes 30-65
- Integrated harness in size 25

Warmth

Outdoor temperature between 0°C and -30°C / 30°F and -20°F

Weatherproofness

Water column at least 10 000 mm

Adjustability

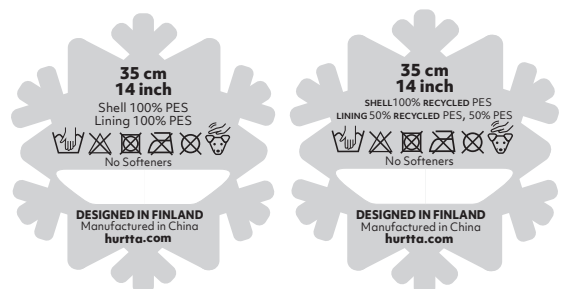

Adjustable at least 20% on back length, neck and waist

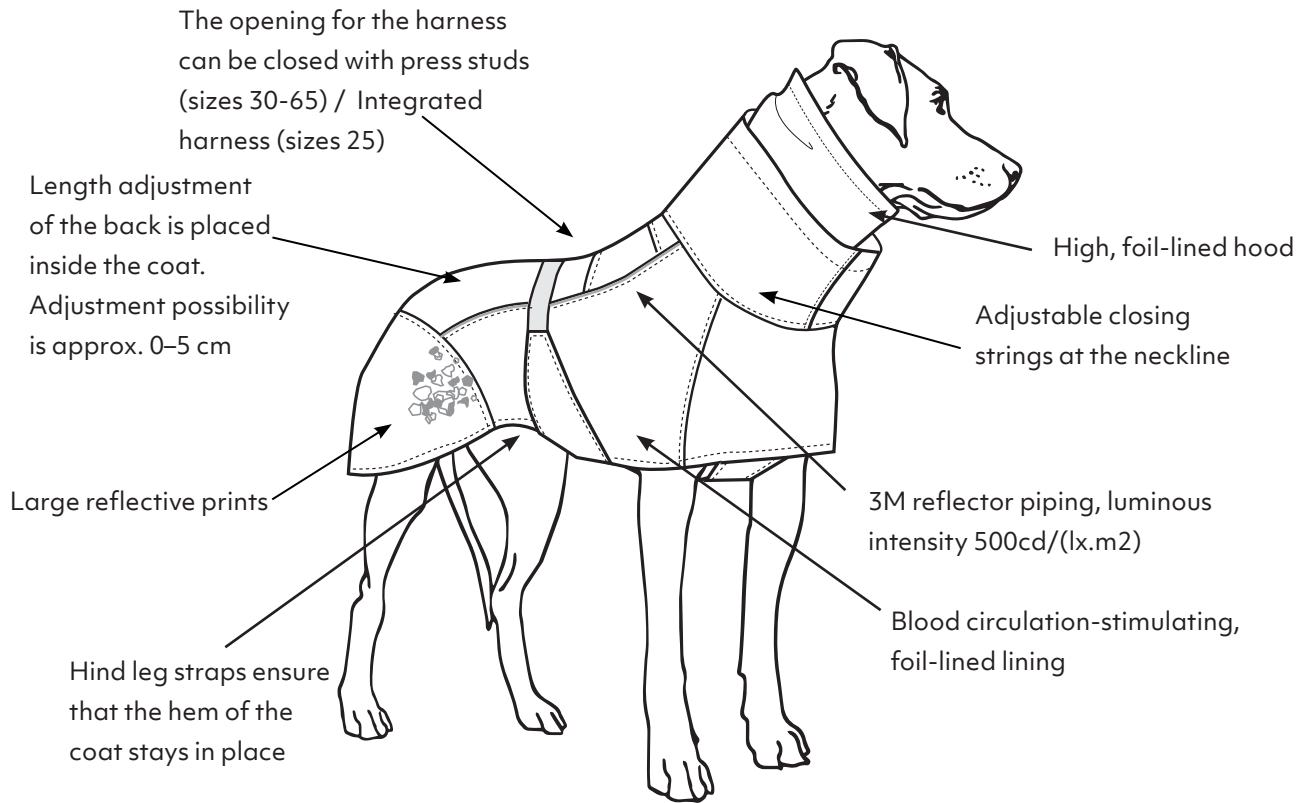

Visibility

Luminous intensity of reflectors is 400-500 lx/m²

Extreme Warmer
